## DETAILED ACTION

### *Election/Restrictions*

Claims 1-18 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 11-06-2006.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 19-29, 32-47, 50-54 are rejected under 35 U.S.C. 102(b) as being anticipated by Kroll et al. USPN 7,123,961. Kroll et al teach the optimization of nerve stimulation by a device that determines (23: 15-17) an observed efficiency (optimal efficiency) (23 17-30) as well as several decision trees including one that selects leads and electrodes (23:1-15) through a decision process (tree) as well as a decision tree determining the type of stimulation (figure 8). Applicant's limitations of intended use such as lead placement and suggesting a configuration to the user are given no patentable weight since the leads and communication devices are not specified as part of the recited invention. The suggesting can be merely what is stored in the device. The

iteration may be stopped once an optimal configuration has been found including an iteration through all configurations.(iteration limit).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 30-31, 48-49 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kroll et al. USPN 7,123,961. Applicant differs in providing electrode nodes which could merely be yes/no decision blocks indicating iteration termination based upon the configuration efficiency. Such an inclusion would be an obvious operation for carrying out the Kroll et al method with to achieve the same desired result.
